About Sparx Services North America

“Align information technology and systems engineering capabilities with business strategy using industry best practices and industry leading tooling to deliver world-class results.”

- Industry thought leader in enterprise architecture, business architecture, systems and software engineering, business analysis, and agile methods
- Member and contributor to
 - UML[®], SysML[®], SPEM, UPDM[™]/UAF, BACM at OMG[®]
 - TOGAF[®], ArchiMate[®], IT4IT[™] at The Open Group[®]
 - UML Profile and Metamodel teams at Business Architecture Guild[®]
 - Frameworx, ODA, and Open APIs at TM Forum
- Open Group Accredited Training Provider, Guild Accredited Training Partner[™], IIBA[®] Endorsed Education Provider (EEP[™])

What is Business Agility?

- “...the ability of an organization to sense environmental change and to respond efficiently and effectively to that change.”
- Gartner

- Effectively achieving agility requires the business to understand...
 - What motivates the business?
 - How does the business behave?
 - How does the business fit together?
 - How does technology support the business?

Understand What Motivates the Business

- What is the mission and vision?
- What are the current business goals and objectives?
- Are objectives quantified and measurable?
- What external and internal factors are driving the business?
- What constraints govern motivation?
- What policies influence culture?
- Are these motivation factors prioritized and co-related?
- Have they been described in a coherent strategic plan?

Understand How the Business Behaves

- Who are your customers, suppliers, and partners?
- What are your externally facing value streams?
- What external events must your business respond to?
- How do people and systems internally collaborate to fulfill external requests?
- What security and regulatory policies govern behavior?

Understand How the Business Fits Together

- What are your internal capabilities?
- How does one capability integrate with another? Where are the handoffs and touch points?
- What data is shared between capabilities?
- How is the business organized?
- Who “owns” particular business processes?
- Who “stewards” common data?

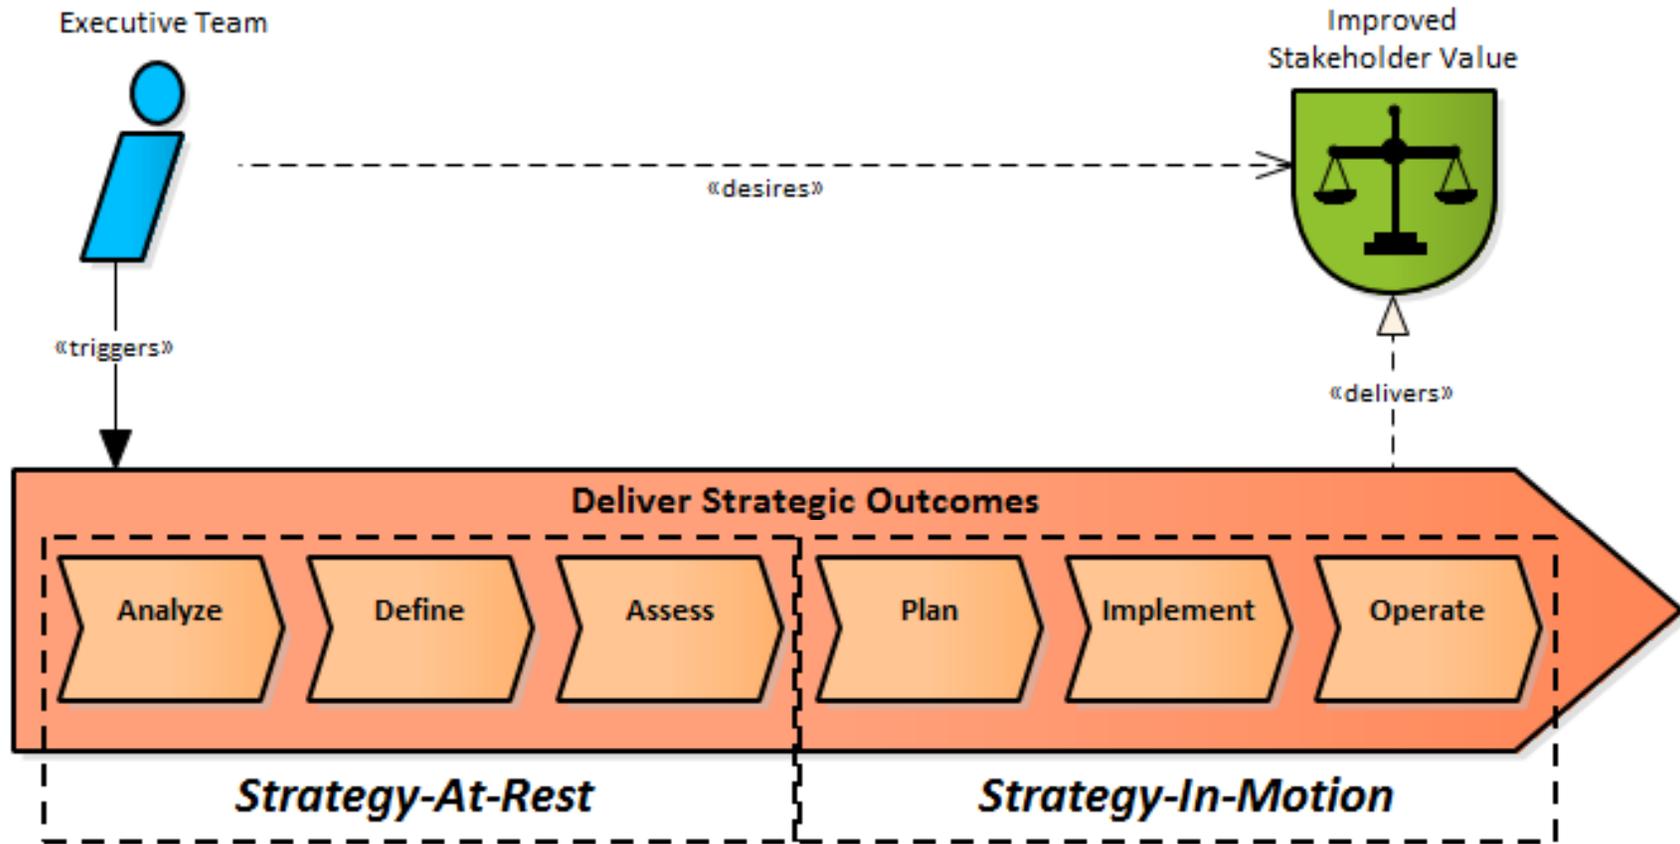

Understand How Technology Supports the Business

- How much money is invested in technology?
- What is the impact of a change to a business process to existing applications?
- Are there business processes that are supported by multiple (possibly redundant) applications?
- What data is shared between applications and business processes?
- What is the impact of an application outage on other applications and business processes?
- Are business critical functions supported by highly-available applications and servers?
- What applications run on which technical platforms?
- What is the impact of a change in security requirements (i.e. new regulation or statute) on existing systems and networks?

Business Architecture Driven Strategy

- **Analyze** competitive landscape and current state capabilities
- **Define** strategy and key initiatives
- **Assess** viability and impact

- **Plan** initiative delivery
- **Implement** and **operate** solutions
- **Monitor** outcomes and establish strategy **feedback** loop

Evolution of Business Outcomes

- Areas of emphasis of capabilities tend to evolve over time
- Need to establish sound foundation at lower level before moving on to the next level

Technology Consolidation

- Reduce over-proliferation of divergent and conflicting technologies

Application Rationalization

- Remove redundant and over-lapping software applications

Business Optimization

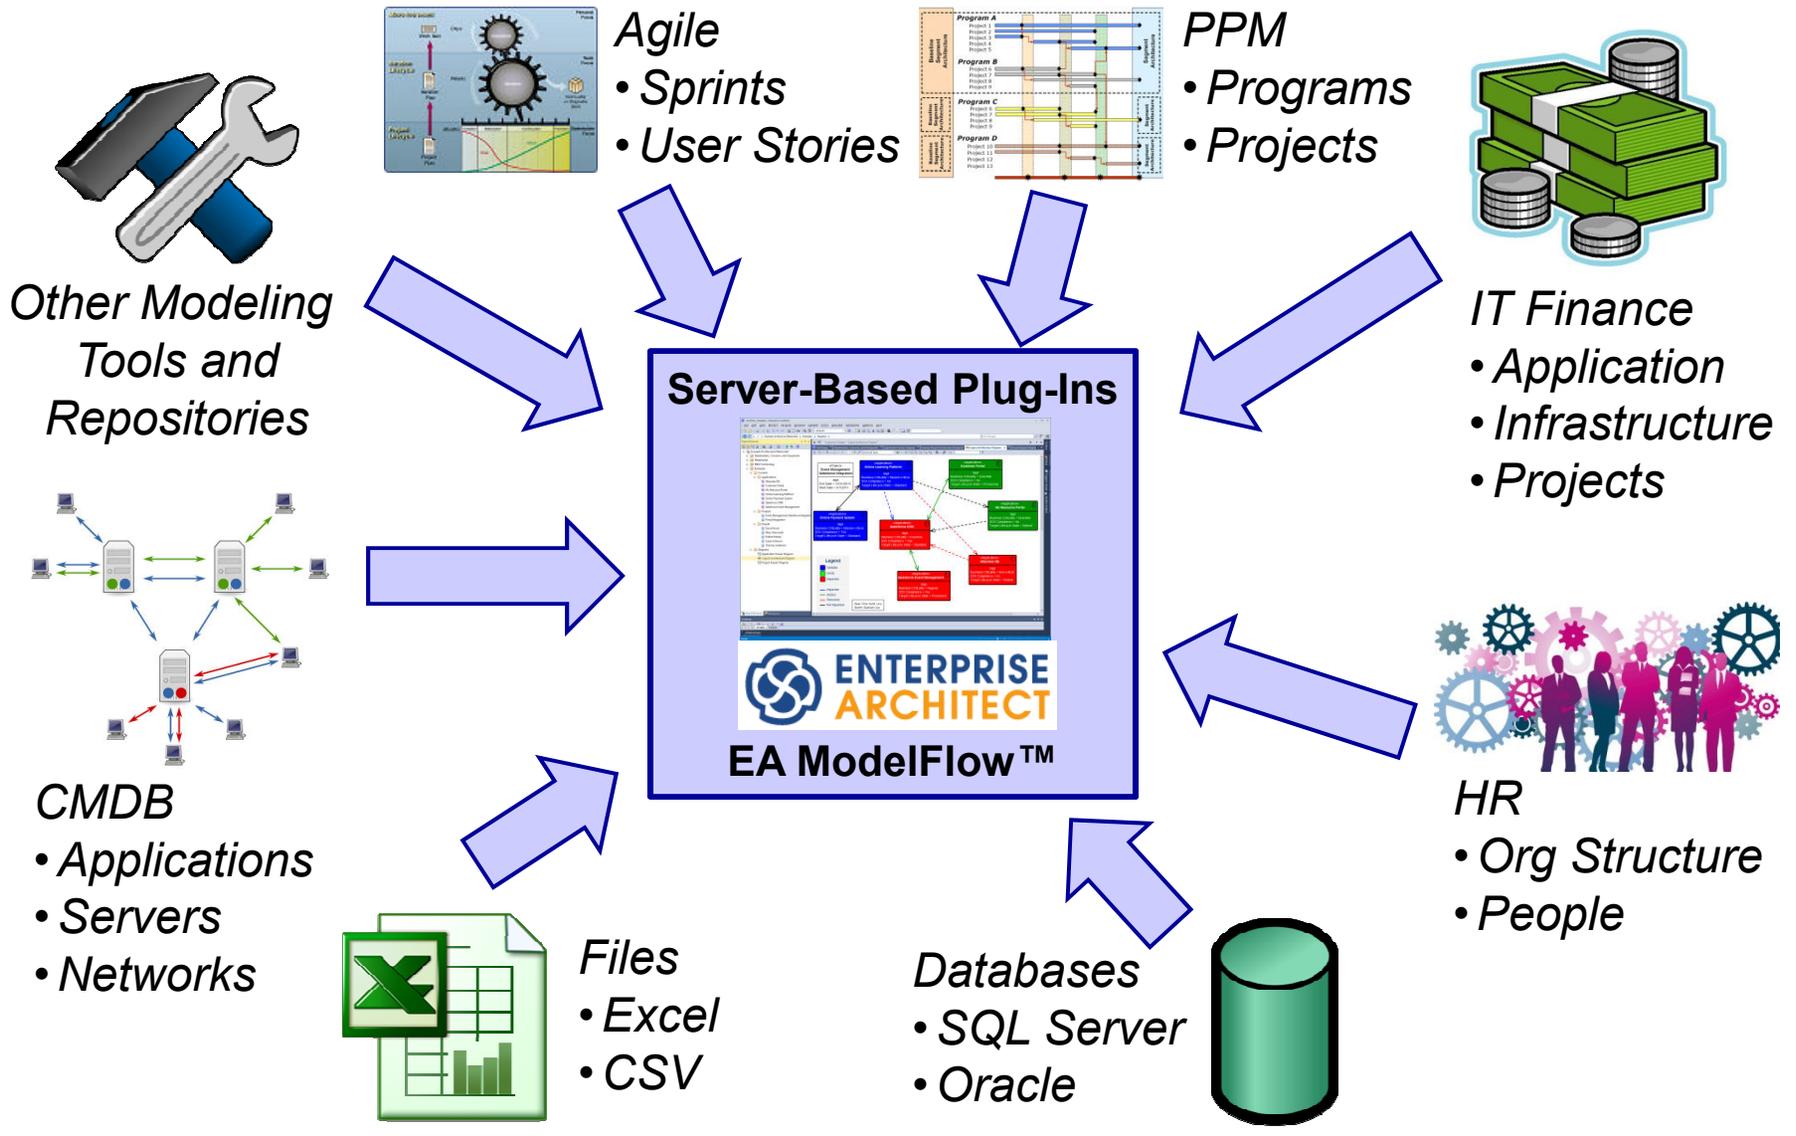

- Improve efficiency of business operating model

Digital Transformation

- Deliver enterprise agility with seamless integration of business and IT

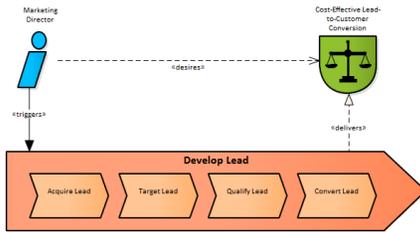

Exploit Federated Repositories
